A truly marvelous plane parts pack that has been around since at least KSP 0.90 and has aged very well (especially when the older J and K bodies were moved into Legacy (renamed to Stail and Avatar) and the current J and K bodies arose to replace them) and is hugely popular for its modularity and ample cargo bay spaces.

This re-post finally removes the old included bundled mods from the download itself and allows you to follow it with [CKAN](#) for KSP 1.9+. Some feature updates may come, such as localization and hangars, but don't get too excited. I have other very large projects now.

Original thread:

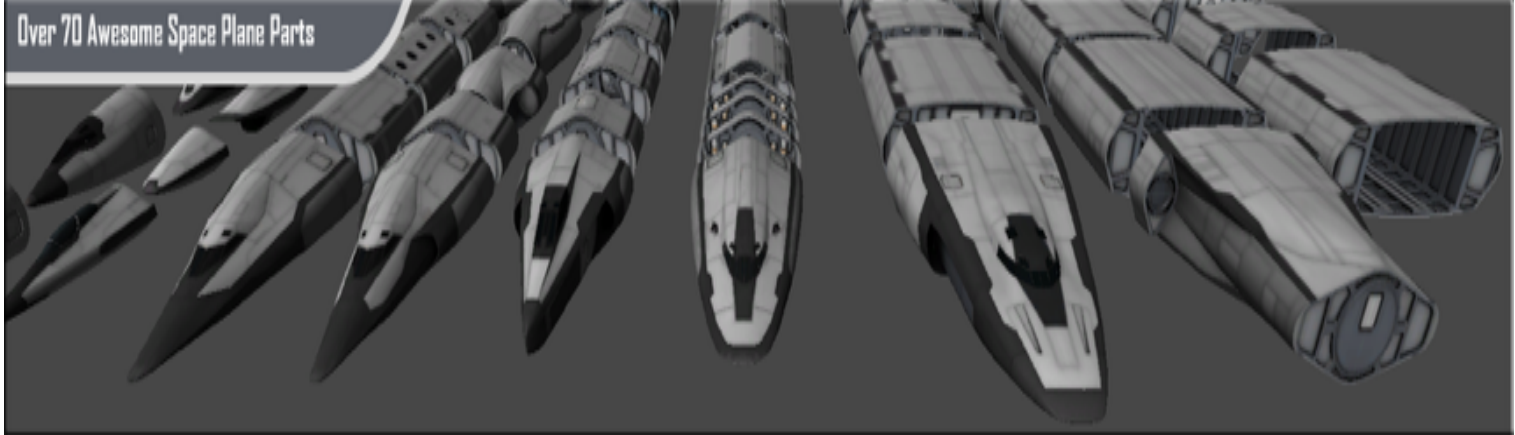

OPT Legacy/Reconfig thread:

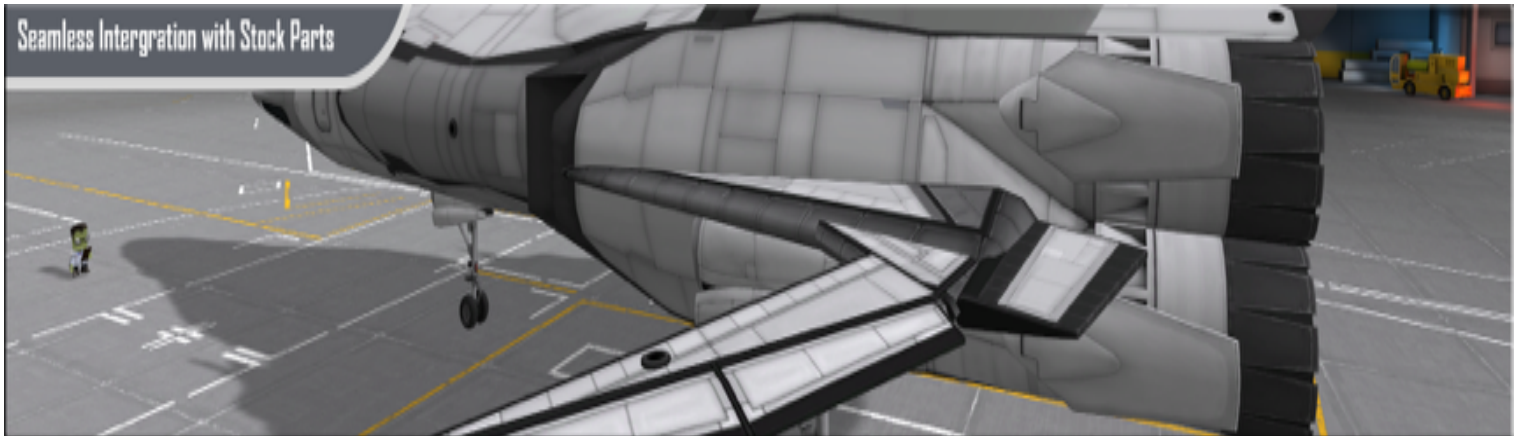

Features (Images):

Over 70 Awesome Space Plane Parts

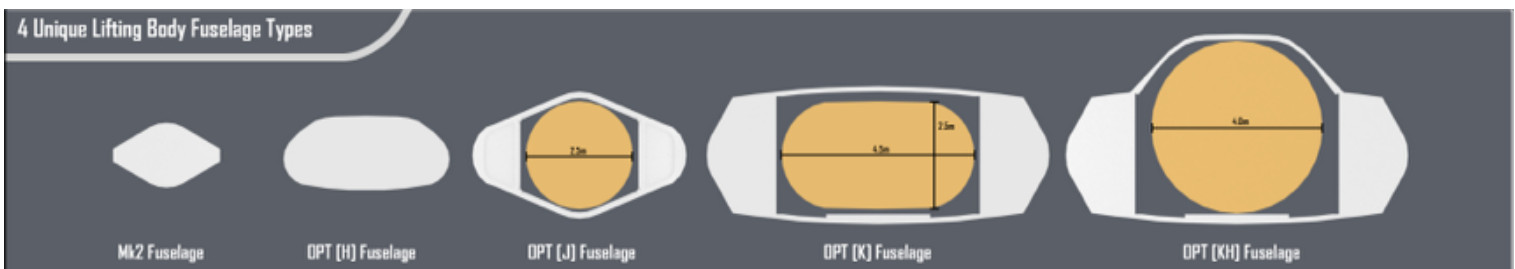

Seamless Intergration with Stock Parts

Powerful and Efficient Near Future Engines

4 Unique Lifting Body Fuselage Types

## Credits:

### Original Creator:

@K.Yeon

### Maintenance/Test team between K. Yeon's silent exit and my takeover:

@stali79 , @Spanksh , @Starwaster , @Stone Blue , @Mycroft , @M\_Ouellette

### Contributors:

[everyone above] + @Winchester , @Flashblade

### The guy in the back:

## Recommended Mods:

- Raster Prop Monitor or ASET Avionics.
- OPT Legacy (Maybe just for the VTOL engine suite. Everyone wants a VTOL-capable spaceplane).
- ....Practically everything else is handled by OPT Reconfig **which is now required**.
  - Community Resource Pack or Wild Blue Industries: Classic Stock (resource systems).
  - Your choice life support (USI, Kerbalism, Snacks! or TAC).
  - Your choice fuel tank provider (B9 Part Switch, Configurable Containers, Modular Fuel Tanks, WBI).
  - Cryogenic Engines.
  - Kerbal Planetary Base Systems. (KH cargo bay is made to fit the core tower part.)
  - Wild Blue Industries: Buffalo and Pathfinder.

Yay! Congrats. I can't wait to get to these parts in my new play-through.

Is it not quite fully transitioned away from the legacy pack? Are you going to sub-package the VTOL engines so there aren't also a bunch of redundant parts, or is that a worry?

@Beetlecat There's nothing substantial in OPT Continued. It's just... precisely this:

finally removes the old included bundled mods from the download itself and allows you to follow it with CKAN for KSP 1.9+.

But I -can- pack just the VTOL engines (or just **all** of the engines) as its own mod or better, work with LGG to update Legacy's netkan to create/split such a mod out of it and have it marked as incompatible with its parent.
